

- ◆ The Bridgemate system supports any and every movement that can be set up in ACBLscore—including movement changes made using EDMOV.
- ◆ Players enter the result of each hand—not the score. Bridgemate and ACBLscore calculate scores automatically—based on vulnerability. This avoids mistakes when converting contracts to scores.
- ◆ Power failures are handled with ease. Batteries in the server continue communication with the Bridgemates. Play is not interrupted. When power is restored, ACBLscore and the Bridgemate program are restarted; everything continues as if nothing happened.
- ◆ The server is an independent device and continues to operate even if its computer connection is “lost.” When it is re-connected to the computer program, results are read into the data file.
- ◆ Data transmissions are encrypted (using different levels of scrambling with rolling key codes) in order to ensure secure communication between each Bridgemate and the server.
- ◆ Telephone (as well as email) support is regularly available.

- ◆ Bridgemates have an easy-to-use keyboard with large keys.
- ◆ The Bridgemate display has large characters that are easy to read.
- ◆ Bridgemates are robust, solid devices that sit directly on the table.
- ◆ As an option—the declarer’s or North/South’s percentage may be displayed on the Bridgemate after each hand has been played.
- ◆ Optionally, immediately after a board has been played, players may view each board’s “traveler” results to see what happened at other tables. The Bridgemate display shows: Declarer, Contract, Result and Score at each table where it has been played.
- ◆ Player entry of Section and Table number at the table is optional.
- ◆ Bridgemate batteries last a long time. Typical games/sessions are: ‘Pro’=300+ and ‘II’=500+.
- ◆ Accuracy is improved. Human errors such as recording an incorrect score or poor handwriting are eliminated.

# Bridgemate Scoring System

Bridgemate is an advanced scoring system for bridge, developed to make recording of the results easier, reduce errors to a minimum, have real-time recording of the results in the ACBLscore computer and increase the speed of publishing final results. Both players and directors benefit from using the Bridgemate Scoring System.

- ◆ Players find the Bridgemate an easy to use device and enjoy the instant feedback on each hand after East/West has verified the result.
- ◆ Directors can now focus completely on supervising the game or tournament without worrying about picking up score sheets, recording player names, etc.

**The Bridgemate system does it all for you.**

Actual size

## The Bridgemate Keyboard

The Bridgemate keyboard has large keys which make it easy to use for people of all ages. Each button has a clear indication of its function which makes it easy to understand.

## The Bridgemate Display

The display uses large characters to show texts. They are easy to view from any angle. Examples are shown on the right.

The Bridgemate® wireless scoring system is used around the world. There are over 2,000 clubs using more than 50,000 Bridgemates in 35+ countries; 25 national Bridge organizations use Bridgemates in their tournaments.

Bridgemates are used by the World Bridge Federation and European Bridge League in all of their tournaments. In Beijing at the 2008 Bridge Olympiad more than 175,000 boards were scored using Bridgemates.

With the Bridgemate Scoring System and ACBLscore, full details of all boards may be uploaded to a website. This will include the contract, declarer, and result for each of the pairs playing each board. This info may be associated with hand records and even the lead. Examples may be seen at:
